

WHAT IS CLAIMED IS:

1. A headset assembly for a bicycle, comprising:

a bearing set engaged with an inner periphery of a top end of a head tube
and a positioning ring engaged with an inner periphery of the bearing set, the
5 positioning ring adapted to be mounted on a steering tube, the head tube having a
threaded outer periphery, and

a cap having a threaded inner periphery which is threadedly connected to
the threaded outer periphery of the head tube.

2. The headset assembly as claimed in claim 1, wherein the cap includes at
10 least two flat surfaces on an outer periphery thereof.

3. The headset assembly as claimed in claim 1, wherein a pressing ring is
adapted to mount to the steering tube and presses on a top surface of the cap.

4. The headset assembly as claimed in claim 1, wherein the cap has at least
two holes defined in a top surface thereof.

15 5. The headset assembly as claimed in claim 1, wherein the inner periphery
of the top end of a head tube is a tapered surface and an inner periphery of the
bearing set is a tapered surface which matches with the tapered surface of the inner
periphery of the top end of the head tube.
